# SpaceNXT™ Q Series

Space Qualified Coaxial Cable Assemblies

Smiths Interconnect's SpaceNXT™ product portfolio provides customers a combination of technology and lower cost of ownership solutions that enable operators to overcome potential market entry barriers while enjoying the benefits of an established market player.

The SpaceNXT™ Q series is part of Smiths Interconnect's overarching initiative entailing the creation of an entire range of higher reliability products for next generation space applications that are readily available to the market.

All products have gone through extensive qualification testing in order to validate today's rigorous application requirements per customer and industry. Q series assemblies are made with low loss ePTFE insulation, and constructed with materials which meet the outgassing requirements of NASA/ESA when tested per ASTM E595. The outer jackets use an ETFE material for maximum radiation resistance. 105Q, 190Q, and 200Q product models are specifically designed for space flight applications on LEO, MEO, and GEO satellites and offered with standardized testing sequences, reducing delivery times and overall cost of ownership.

SpaceNXT™ Q series, specifically designed and tested for next generation commercial space applications.

## Features and Benefits

- Up to 40 GHz
- 100% Flight Test Data
- Low Loss Dielectric Material to Provide Low Attenuation
- Superior Shielding Effectiveness
- Direct Solder Sleeves to Outer Braids for Superior Reliability
- Vented Connector Designs Where Needed
- Stainless Steel Connectors or BeCu Connectors
- Phased Matched Pairs and Sets Available (standard tolerance is +/- one degree per GHz or +/-2.8 picoseconds)

## Applications:

- Satellite Communication & Navigation
- Military, Commercial and Scientific Programs
- GEO/MEO/LEO and Small Satellites
- Manned Space Flight

**Summary:** Cable and connectors individually all passed industry requirements outlined in MIL standards for group A and B tests. Cable assemblies, after going through testing sequences, eventually passed. One noted exception was SMA male connectors which saw increased VSWR after tests performed in sequence 3 testing per TP-9140. Cause of failures was identified during DPA.

# How To Order

## 1 Connector #1

**K F S** 2.9mm Female Straight

**K M R** 2.9mm Male R/A

**K M S** 2.9mm Male Straight

**N M S** Type N Male Straight

**S F S** SMA Female Straight

**S M P F S** SMP Female Straight

**S M R** SMA Male R/A

**S M S** SMA Male Straight

**S M S V** SMA Male Straight

**T M R** TNC Male R/A

**T M S** TNC Male Straight

## 2 Cable *(fixed)*

**1 0 5** Lab-Flex® 105Q

**1 9 0** Lab-Flex® 190Q

**2 0 0** Lab-Flex® 200Q

## 3 Length *(inches)*

**3 6 . 0** Example: 36 in.

## 4 Connector #2

**S M S** SMA Male Straight

**N M S** Type N Male Straight

**K M S** 2.9 mm Male Straight

## 5 Connector #1 Option

**+/- 2.8 ps** +/-2.8ps Phase Matched Electrical Length
