

D Series Connectors

Quick disconnect circular plastic connectors

Hypertac® Hyperboloid Technology

Smiths Interconnect offers an extensive range of superior contact technologies suitable for standard and custom solutions. Hypertac® (HYPERboloid cONTACT) is the original superior performing hyperboloid contact technology designed for use in all applications and in harsh and demanding environments where high reliability and safety are critical. The inherent electrical and mechanical characteristics of the Hypertac hyperboloid contact ensures unrivalled performance in terms of reliability, number of mating cycles, low contact force and minimal contact resistance. The contact sleeve is formed by wires, in a hyperboloid geometry, which align themselves elastically as contact lines around the pin, providing a number of linear contact paths.

Features

Benefits

Low insertion/extraction forces

The angle of the socket wires allows tight control of the pin insertion and extraction forces. The spring wires are smoothly deflected to make line contact with the pin.

High density interconnect systems

Significant reductions in size and weight of sub-system designs. No additional hardware is required to overcome mating and un-mating forces.

Long contact life

The smooth and light wiping action minimizes wear on the contact surfaces. Contacts perform up to 100,000 insertion/extraction cycles with minimal degradation in performance.

Low cost of ownership

The Hypertac contact technology will surpass most product requirements, thus eliminating the burden and cost of having to replace the connector or the entire subsystem.

Lower contact resistance

The design provides a far greater contact area and the wiping action of the wires insures a clean and polished contact surface. Our contact technology has about half the resistance of conventional contact designs.

Low power consumption

The lower contact resistance of our technology results in a lower voltage drop across the connector reducing the power consumption and heat generation within the system.

Higher current ratings

The design parameters of the contact (e.g., the number, diameter and angle of the wires) may be modified for any requirement. The number of wires can be increased so the contact area is distributed over a larger surface. Thus, the high current carried by each wire because of its intimate line contact, can be multiplied many times.

Maximum contact performance

The lower contact resistance of the Hypertac contact reduces heat build-up; therefore Hypertac contacts are able to handle far greater current in smaller contact assemblies without the detrimental effects of high temperature.

Immunity to shock & vibration

The low mass and resultant low inertia of the wires enable them to follow the most abrupt or extreme excursions of the pin without loss of contact. The contact area extends 360° around the pin and is uniform over its entire length. The 3 dimensional symmetry of the Hypertac contact design guarantees electrical continuity in all circumstances.

Reliability under harsh environments

Harsh environmental conditions require connectors that will sustain their electrical integrity even under the most demanding conditions such as shock and vibration. The Hypertac contact provides unmatched stability in demanding environments when failure is not an option.

D Series

Smiths Interconnect's intuitive and durable D Series is recognized for its ease of use and high reliability. The D Series delivers industry-leading performance featuring simple push-button latching and a "D" shaped flange which makes mating orientation obvious.

There are three D Series sizes that accommodate a wide variety of applications. The D01 plug is available with up to nine Hypertac® hyperboloid contacts in less than 0.5" diameter, while the slightly larger D02 offers more extensive options, from three power to 25 signal contacts, or a mixture of power or coax and signal contacts. In addition, the mini D04 connector includes 82 signal contacts to provide higher density and voltages.

The D Series provides medical equipment designers with reliable connections for applications as diverse as electro-physiology catheters, patient monitors, MRIs, intravascular ultrasounds, defibrillators, infusion pumps and laboratory equipment. Polyetherimide versions are autoclavable for reusable medical device applications. D Series connectors are also used in a variety of industrial, rail and commercial applications where reliability is critical.

Cable assemblies are also offered, incorporating the D Series with overmoulding, integrated electronics, metal shells for increased strength, or alternate contact configurations to meet specific customer requirements.

For a variety of applications where reliability is critical

Features & Benefits

Push-button latching feature

- Quick connect – simple one-hand mating/unmating

Available in 3 standard sizes

- D01, D02 and D04
- Standard stocked connectors offered with 3 to 82 contacts

D-shaped housings

- Visually intuitive mating

Hybrid signal, power and coaxial contact technologies available

- Design flexibility allowing multiple contact technologies within a single connector solution

Designed for critical medical applications

- Provides high reliability in a cost effective package
- Autoclavable: Versions with polyetherimide insulators can be autoclaved up to 20 times (pre-vacuum method, 4 minutes each @135°C)

Fixed and in-line receptacles available

- Easy incorporation into box and extension cable designs

Housing alignment and polarization

- Designed to prevent mismating

Custom cable assemblies available

- Complete system solutions reduce logistic and sourcing costs

Crimp contacts shipped unloaded

- Easier termination for reduced cost of ownership: crimp and poke termination eliminates the need to pre-tin, solder or shrink boot

Push-Pull High Density Circular Connectors

- Easily keyed in 6 standard positions to prevent mismatching and available with 5 color code options
- Multiple contact technologies available
- Sealing to IP65 when mated
- UL94 flammability rated materials
- Single use disposable plugs designed to support overmolding/high volume production methods and to withstand at least 30 cycles

Modular and Mini-Modular Connectors

- Mixed signal, power, coaxial, fiber optic and pneumatic modules
- Provides up to 200 amp power
- Cable to chassis and rack & panel; plastic backshell with strain relief and half turn quick disconnect jackscrew
- Float mountable for blind mating
- Configurations compliant to EN45545 standards

Edge Card Connectors

- Double-ended edge card contact design (Patented technology)
- Minimum 2,500 mating cycles
- Simple push-button active latch prevents inadvertent unmating
- Tolerates standard sterilization protocols: Autoclave, EtO, Sterrad®
