

Supplier Quality Assurance Requirements

This document is a supplement to document GP07-001 Supplier Quality Assurance Requirements Manual. Specific SQAR's are applicable per the SQAR Matrix within the SQAR Manual and/or specific SQAR's identified on the Smiths Interconnect Purchase Order.

Supplier Quality Assurance Requirements

Contents

SQAR 100 – Notification, Containment, and Corrective Action of Material Found Nonconforming to Smiths Interconnect Purchase Order Requirements	4
SQAR 105 – Certification of Nondestructive Testing (NDT).....	8
SQAR 110 – Certification of Conformance / Shipping Declaration Document / Packing Slip Requirements.....	9
SQAR 149 – Product Release Process	12
SQAR 160 – Delegation of Inspection (DOI) / Dock to Stock (DTS).....	13
SQAR 165 – Approved Sources for Special Processes.....	15
SQAR 166 – Validation of Special Processes	17
SQAR 179 – Government and Customer Directed Source Inspection	18
SQAR 200 – Key Characteristics (KC) Management	21
SQAR 205 – Characteristic Accountability	24
SQAR 210 – Component Traceability	25
SQAR 220 – Foreign Object Damage (FOD) Control	26
SQAR 230 – First Article Inspection (FAI) Requirements	27
SQAR 235 – Drop Shipment of a Smiths Interconnect Purchase Order.....	29
SQAR 240 – Acceptance Test Plan Procedure (ATP) Approval Requirements.....	30
SQAR 241 – Acceptance Data Package	33
SQAR 250 – Advanced Product Quality Planning (APQP)	34
SQAR 251 – Process Failure Modes and Effects Analysis.....	35
SQAR 300 – Packaging and Package Identification.....	36
SQAR 305 – Part Marking Requirements	40
SQAR 310 – Control of Items with Limited Shelf-Life	41
SQAR 325 – Electronics Solder Requirements	43
SQAR 326 – Electronics Marking Requirements	44
SQAR 329 – Hardness Critical Item	45
SQAR 335 – Tape and Reeled Components	45

Supplier Quality Assurance Requirements

SQAR 354 – Electrostatic Discharge Requirements	46
SQAR 385 – Printed Circuit Board (PCB) Testing.....	46
SQAR 407 – Military Customer First Article Inspection	47
SQAR 410 – Outsourcing Approval Required.....	47
SQAR 419 – Supplier Counterfeit Parts Prevention Requirements	48
SQAR 420 – Provisions for Export-Control Regulation.....	52
SQAR 430 – Provisions for ReaCH and RoHS Requirements.....	53
SQAR 440 – Process Control Plan.....	55
SQAR 450 – Measurement System Analysis (MSA)	55
SQAR 509 – Manufacturing Readiness Review	56
SQAR 528 – Homogeneous Material Requirement	58
SQAR 529 – Delegation of MRB Authority	59
SQAR 532 – Cosmetic Part – Visual Inspection Requirement.....	60
SQAR 534 – Paint / Plating Thickness Test Required	60
SQAR 535 – Material Test Report	60
SQAR 536 – TSO / PMA Tags	61
SQAR 542 – Diodes – Metallurgical Bond	62
SQAR 557 – X-Ray Film Required	63
SQAR 601 – Compliance with DFAR regulations.....	64
SQAR 604 – Provisions for 100% inspection required	65
SQAR 605 – Provisions for Handling and Packaging of Precious Metals	65
SQAR 606 – Internal Source Inspection Required.....	66
SQAR 607 – Sulfur Content	66
SQAR 610 – Smoke and Fire Requirements EN 45545 (molded plastic parts) Materials	67

Supplier Quality Assurance Requirements

SQAR 100 – Notification, Containment, and Corrective Action of Material Found Nonconforming to Smiths Interconnect Purchase Order Requirements

100.1 Scope

Material that departs from drawing, specification or maintenance requirements shall be identified and controlled to prevent unauthorized use or delivery to Smiths Interconnect or other designated destinations. The Supplier shall provide prompt, (ordinarily within 24 hours), written notification on supplier letterhead to the Smiths Interconnect Buyer of nonconforming product or process escapes are identified after shipment to Smiths Interconnect has taken place.

100.2 Material Review Authority

The Supplier shall not exercise Material Review authority without written approval by Smiths Interconnect's Quality Organization. This applies to material that is Smiths Interconnect designed and/or designs controlled to Smiths Interconnect specifications or other OEM designed hardware.

Action shall not be taken on any nonconformance which could affect safety of personnel; adversely affect performance, durability, interchangeability or reliability; affect weight; or otherwise result in failure of the end article to perform its intended function. All doubtful cases shall be submitted to Smiths Interconnect Material Review Engineering on the appropriate form.

Important: Smiths Interconnect reserves the right to reject the decision of the Supplier Material Review Board (MRB).

100.3 Request for Deviation

The Supplier may request consideration for nonconforming material that cannot be reworked to fully conform to drawing specifications, aftermarket maintenance technical data, or purchase order requirements. Requests for deviation shall be submitted to the Buyer using form GF07-005, with copy to the Supplier Quality Engineer and site Quality Manager. The forms and instructions can be communicated by contacting the Smiths Interconnect buyer.

Nonconforming articles shall be retained by the Supplier until disposition of ACCEPT by Smiths Interconnect site MRB.

Note: Smiths Interconnect reserves the right to subtract monies from the purchase order or debit the supplier, for Smiths Interconnect incurred costs related to supplier responsible deviation requests.

Supplier Quality Assurance Requirements

100.4 Material Discovered Nonconforming after Shipment

The Supplier shall promptly notify Smiths Interconnect when nonconforming product has been shipped. The notification shall include part numbers, design activity, CAGE code or Current Design Activity (CDA) code, traceability (lot, serial, and manufacturer numbers), ship dates, quantities, and a description of the nonconformance. This applies to any nonconformance that departs from drawing, specifications, aftermarket maintenance technical data or purchase order requirements.

The Supplier shall send written notification, referencing the site-assigned supplier code, to the attention of

- the Smiths Interconnect Buyer, and
- Site Quality Manager at the issuing PO Smiths Interconnect site, and
- Supplier's assigned Supplier Quality Engineer.

The supplier shall promptly perform internal Root Cause Corrective Action (RCCA) to assure full containment is in effect, and document all nonconformance causes and actions to prevent recurrence. Records of these actions shall be retained in accordance with Section 1.11 in this Manual and be available to Smiths Interconnect on demand.

For confirmed supplier disclosure escapes, a formal corrective action request will be made to the supplier.

100.5 Containment of Nonconforming Material

When a nonconformance is discovered, or the Supplier is notified of a discrepancy, the Supplier must take immediate action to determine if the condition exists on any other work-in-process, in all inventory locations at the Supplier's facility, or in prior shipments. Containment action must be taken and documented prior to the next shipment of the part number involved.

Containment activities taken and/or planned shall be communicated to the Smiths Interconnect site within 48 hours when formally requested through or other documented notification/discovery of nonconforming shipment. The supplier shall perform internal RCCA when any nonconformance has been positively identified as a result of one or more of these actions. Records of these actions shall be retained in accordance with Section 1.11 in this Manual and be available to Smiths Interconnect on demand. Smiths Interconnect may not decide to issue a corrective action request through our system, this does not preclude the supplier from documenting their corrective actions. The Supplier shall not wait for the discrepant hardware to be returned to begin an investigation.

Supplier Quality Assurance Requirements

100.6 Corrective Action

The supplier shall respond to all requests for corrective action on or before the requested response due date.

Supplier shall initiate containment actions immediately to ensure no escapes of repeat issues occur during the investigation stages. These containment steps shall be noted in the CAPA response.

Supplier shall maintain a documented system for determining root causes of documented defects and obtaining corrective action both internally and from its suppliers.

Requests for corrective and preventive action will be issued to the supplier's representative in the form of an electronic (i.e. emailed) CAPA report. The supplier may use their own form, but the form must be equivalent to the Smiths Interconnect 8D form.

Smiths Interconnect may grant the supplier an extension for their corrective action response on a case-by-case basis. Suppliers may formally request a time extension at least forty-eight (48) hours prior to the assigned (original) due date. Requests must be in writing with adequate justification.

See procedure GP07-006 for SCAR requirements.

100.7 Request for Reversals

Rejects identified as supplier's responsibility are documented on the supplier scorecard. If the supplier's investigation of the reject concludes that the nonconformance should not be charged to the supplier's responsibility, then a request to reverse the responsibility must be submitted by the supplier.

Reversal requests should be submitted within 30 days of notification of nonconformance. Any reject listing on a supplier's scorecard constitutes notification whether or not the part is returned. All reversal requests submitted shall provide detailed justification information.

Requests for reversal submitted later than 90 days after nonconformance notification may not receive consideration from the Smiths Interconnect site.

100.8 Return Purchase Orders for Replacement, Reworked or Repaired Parts

Any part being supplied to Smiths Interconnect on a return purchase order must conform to drawing, specifications, aftermarket maintenance technical data or purchase order or have Smiths Interconnect MRB disposition for any repairs. Under no circumstances are parts known to be used or overhauled to be sent as a replacement for an OEM part.

For parts that cannot be reworked to full drawing compliance economically or where repair authorization

Supplier Quality Assurance Requirements

will not be granted, parts are to be scrapped at the suppliers' facility. Supplier shall contact the Smiths Interconnect Buyer prior to scrapping these parts, and Smiths Interconnect reserved the right to witness the scrapping activity.

100.9 Failure Reporting

Smiths Interconnect reserves the right to request failure analysis on nonconforming hardware submitted from the Supplier. Failure analysis reports may contain:

- A process map identifying key inputs and outputs of each affected manufacturing step.
- A product/process Failure Mode Effects Analysis (FMEA) tied to the process map identifying the failures or risks associated to the known nonconformance.
- A control plan developed from process map and FMEA identifying how the Supplier shall monitor those known nonconforming characteristics on future lots to prevent re-submittal of nonconforming product.

100.9.1 Failure Reporting Applicability

Upon request, the Supplier shall submit failure analysis, a short term customer escape prevention plan, and a permanent corrective action plan, focusing on the root cause of the discrepancy. Reports shall be submitted within 30 calendar days of request unless otherwise specified.

Smiths Interconnect reserves the right to issue a Supplier Corrective Action Request (SCAR) requiring completion of a part number specific Smiths Interconnect project with the on-site assistance of Supplier Development Engineering.

Supplier Quality Assurance Requirements

SQAR 105 – Certification of Nondestructive Testing (NDT)

Supplier shall certify that NDT was performed in accordance with the applicable specification(s). Where appropriate, the supplier is to retain records reflective certification of personnel, equipment, and process. Certification shall include as applicable:

- Authorized signature and title
- Smiths Interconnect part number and revision
- Smiths Interconnect purchase order number
- Process specification and revision
- Lot, batch, date code or serial number(s)
- Quantity
- Results

Supplier Quality Assurance Requirements

SQAR 110 – Certification of Conformance / Shipping Declaration Document / Packing Slip Requirements

110.1 Scope

The Supplier is responsible for maintaining and supplying accurate and legible certification documentation as objective evidence of meeting drawing, specification, technical data, or purchase order requirements.

110.2 Certification of Conformance / Shipping Declaration Document / Packing Slip Requirements

The exact format of the Certificate of Conformance may vary by supplier. Requirements can be identified within the Certificate of Conformance, Packing Slip, and/or material packing but shall contain the following minimum information:

- Supplier's Name
- Manufacturer's name (when different from the supplier)
- Smiths Interconnect part number as specified on the purchase order
- Smiths Interconnect purchase order number
- When a Smiths Interconnect part number is not specified on the purchase order the supplier's part number shall be used
- When a supplier's part number is not specified on the purchase order the material's descriptor shall be used
- Smiths Interconnect's drawing revision as specified on the purchase order
- Change notices shall be included if they are not part of the revision level
- When a Smiths Interconnect drawing revision is not specified on the purchase order no drawing revision is required
- Serial Number (as applicable)
- Date code (as applicable)
- Lot/batch/heat number (as applicable)

110.3 Bulk Raw Materials

Unless otherwise specified, purchased bulk raw material (sheet, strip, plate, wire, rod, bar, tubing, solder, powder, paint, oil, fluids, etc.) shall be supplied to the latest procurement specification issue. Material certified to a previous specification issue and of the proper type, grade, or class called for by the

Supplier Quality Assurance Requirements

engineering drawing or technical data, may be used until depleted, unless restricted by the superseding specification revision. Certifications for material shall include specification number and revision letter applicable to each lot of material.

110.4 Evidence of Source Approval

A Source Acceptance Stamp (or facsimile) shall be placed on the shipping documentation (packing slip and/or C of C) for Purchase orders requiring SQAR 149. A Source Acceptance stamp is independent of the Certificate of Conformance signature requirements. C of C required signature and date should not be placed in the Source Acceptance Stamp area.

The individual performing the Source Inspection is responsible for providing the Stamp Impression and Date. This may be a Smiths Interconnect approved Source Inspector or it may be a Self Release Approved Supplier representative, whichever is appropriate.

A signature is acceptable in lieu of a stamp impression for an Approved Self Release Supplier representative in organizations that do not issue internal employee acceptance stamps and control electronic approval within their Quality Management System.

110.5 Certificates of Conformance for Kits

For materials supplied as a kit, a top level certification of conformance, subject to the documentation requirements above, will be accepted for the entire lot or receipt of kit(s) as long as:

- Manufacturing and procurement traceability and configuration management for every component part in the kit is maintained
- Associated data such as procurement certificates of conformance, test data, first article inspection reports, etc. are maintained and available upon request.

110.6 FAA / EASA Tags

Suppliers holding an FAA production approval shall ship parts with 8130-3 tags reflecting newly manufactured certification and not returned to service or repaired status to all Smiths Interconnect OEM sites. This requirement applies to both new shipments and parts that may have been rejected or returned by Smiths Interconnect or from a Smiths Interconnect customer location. Suppliers shall contact buyers if there are any questions in issuing new 8130-3 tags as Smiths Interconnect OEM sites can only return parts to suppliers requiring Part 21 type rework and have not been used in revenue flights.

Supplier Quality Assurance Requirements

Supplier Quality Assurance Requirements

SQAR 149 – Product Release Process

149.1 Scope

Smiths Interconnect product may only be released for shipment from the supplier by either of these methods:

- After Source Inspection by the supplier's approved Self Release (SR) supplier program and delegate.
- After (Smiths Interconnect) Source Inspection by a Smiths Interconnect Approved Source Inspection Agent.
- Before (Smiths Interconnect) Source Inspection services to be performed at the Smiths Interconnect site per the direction of Smiths Interconnect Sourcing Organization. This method requires the inclusion of a shipment-specific Smiths Interconnect Sourcing Organization authorization with the shipper/cert/pack slip.

Smiths Interconnect or Customer Source Inspection approval does not relieve the supplier of the responsibility and/or liability for full compliance with all purchase order/contract requirements.

149.2 Penalties / Fees

Failure to comply with Product Release requirements may result in a receiving inspection fee per shipment received (based on Smiths Interconnect incurred costs – minimum \$500 U.S.), and may incur additional product rejection charges.

149.3 Source Inspection

Suppliers who are not approved to release product shall request source inspection services.

Supplier Quality Assurance Requirements

SQAR 160 – Delegation of Inspection (DOI) / Dock to Stock (DTS)

160.0 Scope

Dock to stock is a program by which product is received directly into the Smiths Interconnect inventory without inspections being performed by Quality. This program is granted to suppliers which meet the following criteria.

Option 1 - Supplier

All product from a supplier will be eligible for DTS given the following requirements are met. This does not apply to product with customer specific requirements for incoming inspection.

DTS is granted when the supplier has provided proof of its control over the process or processes at its site:

- On-site assessment results are satisfactory.
- Three month moving average VPR is ≥ 95 .

For new products from a DTS approved supplier, DTS will be granted under the following conditions

- After three consecutive receipts without non-conformance
Or
- If it demonstrates control of Key Characteristics per SQAR 200.

The supplier may request the suspension of the application of the procedure, if it considers that they can no longer provide the service required.

Smiths Interconnect shall withdraw DTS if:

- The supplier has had 2 major non-conformities (critical dimensions, visual appearance, etc.) during the Smiths fiscal year.
- The supplier informs Smiths Interconnect that it can no longer maintain the operating conditions validated during FAI.

Option 2 - Product

DTS may be granted for an item when Supplier Quality Performance for the item is \geq Lot Acceptance Rate (LAR) for a period of 1 year, except in specific cases related to process criticality.

The acceptance of the order by the supplier means that it is committed to full compliance with the

Supplier Quality Assurance Requirements

requirements of the present document and the individual specifications for the products in question (specs, drawings, etc.).

Components on DTS shall not be subject to submission of the SQAR 127 measurement data, but this report shall be available within 48 hours upon request by Smiths Interconnect.

160.1 Loss of Dock to Stock

Following a non-conformity detected internally or by our customer regarding a DTS article, the DTS status of this article shall be rescinded by Smiths Interconnect.

The supplier shall agree to submit inspection reports to Smiths Interconnect for the next 3 shipments. Otherwise, Smiths Interconnect shall perform the inspection service itself and charge £100 per hour for that service.

Smiths Interconnect Supplier Quality shall validate the supplier's action plan based on the 8D report issued following the incident and shall decide on a return to DTS status as a function of the relevance of the proposed corrective actions as well as the supplier's past history.

Supplier Quality Assurance Requirements

SQAR 165 – Approved Sources for Special Processes

165.1 Scope

Special process specifications are listed on the Smiths Interconnect engineering drawing or within ISO 9001 requirements. Suppliers shall use only Smiths Interconnect approved sources except for suppliers with design responsibility for hardware supplied to Smiths Interconnect may use their own approved process suppliers provided the Smiths Interconnect supplier complies with the following:

- Design and Development must be an element in their Quality Management System (Ref AS9100)
- Supplier Control must be an element in their Quality Management System (Ref AS9100 7.4)

This SQAR does not apply to:

- Industry standard parts such as AN, NAS, MS etc.

165.2 Change in Location of Facilities

The Approval of Sources to Controlled Specifications is location specific. In the event of change in location, notification shall be made prior to the relocation and with substantial time (180 days) for hardware, system, and process re-qualification. Also, satellite sites shall be approved independently of a Source's primary location and must have a separate Smiths Interconnect Supplier ID.

Parts processed at the location that is not yet approved in the APSL are considered non-compliant hardware. Notify by e-mail to the buyer. Suppliers' notifications shall contain the following supplier information as a minimum:

- supplier ID/DUNS number
- old data and new data (i.e. if address change, list the prior address and the new address)
- name of supplier quality contact
- phone number of supplier quality contact
- e-mail address of supplier quality contact

165.3 Approved Vendor List (AVL)

The AVL is the list of Approved Vendor. The Supplier shall periodically review the AVL to ensure sources are not expired and to independently verify the source's capability and quality specific to the Supplier's

Supplier Quality Assurance Requirements

product.

165.4 Approved Special Source List (ASSL)

The ASSL is the list of Special Process Specifications and Approved Sources to perform those processes. Sources performing Special Processes shall be approved by Smiths Interconnect or must possess the applicable NADCAP accreditation, including the appropriate audit scope/checklist, are accurate and up to date. Sources not approved per the ASSL or NADCAP must be approved by Smiths Interconnect Quality Department for the applicable special process to be performed.

The Supplier is responsible for the cost of NADCAP accreditation.

Category	NADCAP Commodity/Code
Chemical Processing	Chemical Processing/CP
Composites	Composites/COMP
	Conventional Machining as a Special
Elastomers	Elastomer Seals/SEAL
Electrical & Wiring, includes C&H, PB & PBA	Electronics/ETG
Heat Treat, includes Brazing	Heat Treating/HT
Material Testing	Materials Testing/MTL
Nonconventional Machining	Nonconventional Machining/NM
Nondestructive Testing	Nondestructive Testing/NDT
Surface Enhancement	Surface Enhancement/SE
Thermal Coatings	Coatings/CT
Welding, Includes Torch & Induction Brazing	Welding/WLD

Supplier Quality Assurance Requirements

SQAR 166 – Validation of Special Processes

166.1 Scope

This SQAR applies to any purchase order with item(s) which require special processes per the Smiths Interconnect drawing or Purchase Order requirements. Special process may include, but are not limited to, the following:

- Plating and Coating
- Bonding and Sealing
- Crimping
- Force fitting or Shrink fitting
- Forging
- Heat Treatment
- Laminating (composites, ...)
- Measurement methods such as X-Ray
- Other manufacturing special processes could be provided by Customers

Special process shall be qualified based on the test protocol per the requirements of GF06-005 Special Process Protocol and Test form:

- General Characteristics
- Product Characteristics: Key Characteristics, Technical Specifications, Product Configuration
- Process Characteristics: Manufacturing Tools/Devices, Calibrated Equipment, Atmospheric Conditions
- Test Results and Survey: Samples, Phases, Inspections, Control Plan

Suppliers are responsible for compliance to special processing requirements, including process validation, process re-validation after major changes and product verification as specified by the controlling procedure and/or applicable workmanship standards. Special Process requirements are identified on the controlling engineering drawings and purchase orders.

Preferred Suppliers are those who are able to provide test protocol for new special process qualification and/or are certified to international and/or other applicable standards such as:

AS9100 ISO/TS 22163 NADCAP

If a Supplier is not certified to any aforementioned or other standard(s), it will be assessed per the following requirements (ref: GF06-003 Special Process Assessment form):

Supplier Quality Assurance Requirements

SQAR 179 – Government and Customer Directed Source Inspection

179.1 Scope

This SQAR applies to any purchase orders with items reflecting a Government Prime Contract Number. Government Source Inspection is required for these items. The inspection will be accomplished at the Supplier's facility unless otherwise specified on the Purchase Order. The supplier shall make available all necessary specifications, documents, facilities and assistance. Government end-use material subject to SQAR 179 shall not ship without evidence of Government Source Inspection approval unless the prime DCMA office provides alternate instructions in writing.

This SQAR may also be applied to Smiths Interconnect Customer Source inspection; however, Smiths Interconnect customer's quality representatives do not have the authority to approve quantities reflecting a Government Prime Contract Number noted on the Purchase Order unless granted by the Government Contract.

179.2 Government Notification Requirements

Upon receipt of the order containing quantities reflecting a Government Prime Contract Number, promptly notify the Government Source Inspection (GSI) Representative who normally services your facility and provide a copy of the order so that appropriate planning for Government Source Inspection can be accomplished. The GSI Representative shall be notified no more than 7 workdays before completion of the order. If unsure of the DCMA Representative, contact the Smiths Interconnect Buyer immediately.

GSI may request the supplier to furnish all work instructions down to the lowest level(s), including all mandatory government inspection points, prior to the initiation of any work.

179.3 Smiths Interconnect Customer Notification Requirements

Promptly notify the Customer Source Inspection Representative as directed on the Purchase order or by the buyer. Careful attention should be given to planning source inspection to meet Purchase Order schedules. If unsure of the Customer Quality Assurance Representative (QAR), notify the Smiths Interconnect Buyer immediately.

Supplier Quality Assurance Requirements

179.4 Government In-Process Inspection

The DCMA QAR will notify the supplier of where in the process source inspection is required, and reserves the right to inspect product or process at any point along the manufacturing of the product. The supplier shall provide reasonable facilities and inspection equipment for in-process inspection and records where requested.

179.5 Smiths Interconnect Customer In-Process Inspection

The Purchase Order will specify where, in the process, source inspection shall occur by an authorized Customer QAR. The supplier shall provide reasonable facilities and inspection equipment for in-process inspection and records where requested. Supplier shall notify Smiths Interconnect a minimum of 72 hours prior to inspection.

179.6 Pre-Cap Source Inspection

Smiths Interconnect's pre-cap source inspection is required at the supplier's facility. Smiths Interconnect shall be notified ten days prior to the close up or sealing of devices supplied against this order so that Pre-cap / Internal Visual inspection can be performed. Evidence of Smiths Interconnect's Quality representative's certification shall accompany shipment per SQAR 140.

179.7 Evidence of Source Acceptance

Evidence of Source Inspection acceptance for a single shipment will be the authorized stamp or signature on the packing list. If Government Source Inspection / Defense Contract Management Agency:

In addition to an authorized stamp, a letter of delegation (LOD) authority between DCMA offices is required, showing that the specific part number being shipped has been granted GSI delegation. The LOD authority must be linked to the part numbers and quantities that have been granted delegation. Where the total PO quantity is greater than the quantity pegged to the Government Prime Contract(s) Number, the LOD will be issued for the quantities associated with the Prime Contract(s) only.

GSI acceptance of a lot of parts, which is greater than the quantity of parts being shipped, is allowed only if the evidence of GSI acceptance can be traced to each part in subsequent shipments. This can only be done if parts and GSI accepted document are marked with serial numbers or lot numbers as required by print or manufacturer's assigned traceable numbers.

Supplier Quality Assurance Requirements

Government and Commercial items shall be segregated prior to presenting to GSI for Inspection. The shippers for GSI and non-GSI quantities shall be kept separate for GSI acceptance.

If NASA Source Inspection:

The NASA quality representative shall be notified immediately upon receipt of this order. NASA or its designated representatives shall be notified 48 hours in advance of the time articles are ready for inspection or test. Inspection (in-process, pre-cap and/or final) is required prior to shipment from the supplier's facility.

Supplier Quality Assurance Requirements

SQAR 200 – Key Characteristics (KC) Management

The Smiths Interconnect Purchase Order holder is responsible for review of, and compliance to, all Special Characteristic management requirements on all drawing levels of items sold to Smiths Interconnect including those generated by sub -tier suppliers.

200.1 Applicability

Key Characteristic Management requirements apply to any Smiths Interconnect part number being made for the first time by a supplier. The requirement shall continue to apply during ongoing production. Where a purchase order holder subcontracts some/all of the manufacture of an item, the PO holder shall be responsible for the compliance of their sub tier(s) to the requirements of this SQAR.

200.2 Identification of Special Characteristics

Key characteristics (KCs) shall be those characteristics identified as such by symbol or note on Smiths Interconnect engineering drawings and specifications. Alternatively, KC's may be identified as Critical Characteristics, Major Characteristics, or Critical to Quality, on the Smiths Interconnect engineering document. The above mentioned termed shall be used interchangeably.

200.3 Requirements for Control of KCs

Where required by specification, producer is required to develop, adhere to, and retain an inspection plan to assure each feature designated KC conforms to specified requirements. The process control plan shall be submitted to the owning Smiths Interconnect procuring agent and will be approved by site Quality. Review and approval shall be obtained prior to any shipment of parts.

200.4 Supplier Exception and Requirements

Suppliers taking exception to this SQAR in its entirety shall ensure that a drawing change removing the requirement is received before accepting orders. Removal of this SQAR from a PO does not alleviate the supplier from meeting all product requirements.

Supplier Quality Assurance Requirements

200.5 Disposition of Material

Process capability levels not meeting the requirements of the process control requirements specified on the drawing/spec shall not be cause for product rejection provided that each piece is inspected, found acceptable to tolerance, and records of inspection results are maintained.

200.6 Process Control Documentation

Where KC's are identified on the Smiths Interconnect engineering specification, process planning and control documents such as MSAs, PFMEAs, Control plans, etc. shall be generated under the supplier's document control system and maintained as quality records. These records are subject to audit and shall be made available for review. Process control documentation is a quality record and shall be retained by the supplier per PO requirements for quality records.

200.7 Establishment and Reporting of Process Capability

200.7.1 Capability Studies

Where KC's are identified on the Smiths Interconnect engineering specification, the seller shall perform process capability studies to demonstrate the ability of the process to produce results within specification limits.

In the event of short run or low volume production in which capability studies are not logical, 100% inspection will be required.

200.6.2 Capability Calculations

Capability calculations shall be made as defined below:

- 1) Supplier measures each KC on each piece and records the actual value.
- 2) Up to the first 30 measurements, supplier reviews the data, assures compliance to the tolerance limits, and looks for variation from run to run.
- 3) After 30 measurements supplier reviews Cpk and Ppk to determine if they meet the capability requirement defined in the applicable process control specification.
 - Short-term study must be ≥ 1.66 Ppk
 - Long-term study must be ≥ 1.33 Cpk
- 4) Suppliers not meeting the required capability performance level for Ppk after the first 30 pieces shall implement a documented process capability improvement milestone plan when required by controlling specification. Improvement plans shall be maintained by the supplier and are subject to audit.
- 5) Further capability study data and improvement plan changes/updates as required by controlling specifications shall be communicated to Smiths Interconnect until specification-defined process capability requirements are achieved.

Supplier Quality Assurance Requirements

200.8 Process Monitoring

200.8.1 Control Plan

Once process capability requirements have been met, the supplier shall operate to a control plan meeting the requirements of the applicable process control spec and SQAR 440. Supplier shall maintain records of compliance to the control plan.

200.8.2 Escapes of Key Characteristic

Escapes of a Key Characteristic shall be cause to revise any required control plans and PFMEAs. In the absence of an assignable cause and corresponding error-proofing for the escape, process capability shall be re-established.

200.8.3 Changes to Manufacturing or Inspection Processes

Changes to the manufacturing or inspection processes shall be cause to review any associated control plans and PFMEAs. Where such changes may affect process capability or where required by specification, a new process capability study shall be conducted to ensure capability requirements remain met.

Supplier Quality Assurance Requirements

SQAR 205 – Characteristic Accountability

205.1 Scope

Suppliers shall have a verifiable methodology for controlling and recording inspection of all design characteristics, as well as a method of validating received components from sub-tiers.

205.2 Detailed Inspection Plans (DIPs)

A Detail Inspection Plan (DIP) documents the inspection plan for a part to ensure that all engineering drawing characteristics and notes are inspected and/or controlled by appropriate methods. DIPs shall be documented in a manner that meets the intent of the FAIR form.

A DIP may be used as a record, or may reference supporting records such as routings, receiving or in-process inspection sheets, final test/inspection reports, or statistical data as long as the DIP and/or supporting records is complete, accurate and reproducible. The DIP shall define the manufacturing operation at which the characteristic is inspected and the inspection method used, including the type of tooling/gauging instrumentation used. Characteristics that are subject to change after in-process acceptance (e.g., growth, shrinkage, and/or distortion) must be re-inspected prior to final acceptance.

DIPs which contain characteristics which are “tool controlled” (castings, molded parts, etc) may contain less than 100% of the Smiths Interconnect drawing characteristics provided the following conditions are met:

A number of characteristics shall be selected as “control” dimensions. Control dimensions shall be of quantity and type such that inspection of these characteristics will give the supplier enough information (based on tool construction, assembly, process variation, and drawing tolerance) to assure that all other drawing characteristics are in conformance.

The supplier shall maintain a plan which clearly documents the control dimensions for all design characteristics. DIPs are not applicable to Standard and/or Catalog Hardware that if procured directly would be classified as SQAR 002.

Supplier Quality Assurance Requirements

SQAR 210 – Component Traceability

The Supplier of any component assembly shall be able to, upon request, provide a list of all material utilized in the creation of said assembly. Material requiring this work order to lot/date code level traceability includes electrical components, the active and passive parts and items in the schematic.

The list shall contain as applicable:

- Work order number
- Serial number range in the work order (as applicable)
- For each electrical component used in the work order:
 - The component name
 - Smiths Interconnect part number
 - Reference designators where this Smiths Interconnect part number is used
 - Quantity used per assembly
 - Component OEM manufacturers used in the work order
 - Manufacturer part numbers used in the work order
 - Lot numbers and / or manufacturing dates used in the work order
- Also required to be provided upon request, is the component distributor and procurement date of each component listed

The system must account for any/all components that require replacement past initial installation. The traceability must be maintained throughout the manufacturing process from work order launch to shipping to Smiths Interconnect.

In addition to the component traceability, the supplier shall, upon request, provide all necessary processing history for the assembly in question. This shall include process name, date and time, location, and operator ID of the personnel performing the function.

If more than one lot is included in this shipment, each lot must be individually identified and packaged separately.

Supplier Quality Assurance Requirements

SQAR 220 – Foreign Object Damage (FOD) Control

The supplier shall ensure that risk of Foreign Objects and subsequent Foreign Object Damage (FOD) is minimized from all parts prior to shipment. In addition to maintaining compliance with Smiths Interconnect site's cleanliness specifications, all suppliers must strive towards a FOD free environment during machining, manufacturing, assembly, maintenance, inspection, storage, packaging and shipping.

- Potential FOD includes but is not limited to burrs, chips, dirt, corrosion and contamination resulting from the manufacturing, assembly, maintenance, processing, cleaning, storage and subsequent packaging of parts.
- Suppliers must ensure all passageways- cast and/or machined are clear of chips, core material, dirt, breakout of cast walls, etc.
- Prior to closing inaccessible or obscured areas and compartments during assembly, supplier shall ensure the areas are free of FOD.
- Suppliers must have controls in place to provide product this is clean and FOD free prior to shipment.
- Suppliers are required to maintain a FOD prevention program, which includes prevention and elimination of FOD from the manufacturing processes and work area.

Specific attention should be given, where applicable, to items such as:

- Housekeeping and cleanliness
- Food and beverage control
- Tool and small part accountability
- Loose objects
- Material handling and parts protection
- External cleaning following evidence of external contamination

Supplier shall ensure that the responsibility for the FOD prevention program is clearly defined and appropriate personnel have received FOD awareness training.

Suppliers are responsible for flow down of these requirements to their sub-tier suppliers to ensure FOD free products.

Suppliers FOD prevention program and controls are subject to periodic audits by Smiths Interconnect as deemed necessary to ensure program effectiveness and compliance.

For additional information regarding FOD prevention, refer to National Aerospace Standard NAS 412, "Foreign Object Damage / Foreign Object Debris (FOD) Prevention".

Supplier Quality Assurance Requirements

SQAR 230 – First Article Inspection (FAI) Requirements

230.1 Scope

The Supplier holding the Smiths Interconnect Purchase Order is responsible for assuring completion of the First Article Inspection Report (FAIR) per AS9102 (Current Revision) and this SQAR for all Smiths Interconnect design characteristics generated by the supplier or their sub-tiers. In the event of any conflict between this SQAR and AS9102, the order of precedence shall be 1) the text of this SQAR, 2) AS9102.

The FAI requirement applies to each bill of material or parts list item with a Smiths Interconnect part number that is invoked in the product design, including lower level Smiths Interconnect detailed drawings identified on top level assembly drawing(s), and each cavity or tool serial number for products whose dimensions are controlled by the tool.

FAIRs may be required on Customer or Supplier Drawings that are non-Smiths Interconnect designs or CAGE codes if specified on the Purchase Order. Suppliers may offer an alternate FAI plan to meet the requirements of this SQAR. Approval to operate under this alternate FAIR plan shall only be authorized in writing by Smiths Interconnect Site Quality management.

Smiths Interconnect or Customer FAIR approval does not relieve the supplier of the responsibility and/or liability for full compliance with all contract requirements.

The following items are exempt from the requirements of this SQAR or Identify Smiths Interconnect Site Specific Requirements:

- Raw materials.
- Unaltered material consigned by or purchased from Smiths Interconnect
- Smiths Interconnect vendor item drawings including, specification-controlled. While these drawings do not require a detailed FAIR, they shall be documented on form 1 of AS9102 for all assemblies and/or lower level FAIRs where they form part of the top level assembly part number.
- Nonfunctional hardware (protective covers, shipping hardware, etc.), unless otherwise specified.
- Off the shelf sheet stock, unless post-milled processed.

230.2 Penalties / Fees

Failure to comply with Product Release requirements may result in a receiving inspection fee per shipment received (based on Smiths Interconnect incurred costs – minimum \$500 U.S.), and may incur additional product rejection charges. Smiths Interconnect will not accept responsibility for material delivered prior to first article approval when First Article Acceptance is required under this Purchase Order.

Supplier Quality Assurance Requirements

Supplier Quality Assurance Requirements

SQAR 235 – Drop Shipment of a Smiths Interconnect Purchase Order

235.1 Scope

The following requirements apply to Smiths Interconnect suppliers when they are instructed to ship material to another Smiths Interconnect supplier, site or customer.

235.2 Prior to the Drop Shipment

The Supplier shall ensure that the product:

- Meets all Purchase Order requirements (e.g., SQAR, engineering drawing, Manufacturing Operations & Tooling [MOT] or maintenance technical data)
- Is released in accordance with SQAR 149 (Required only for drop shipments to Smiths Interconnect customers).

The Supplier cannot drop ship if the product:

- Is a sample
- Is a research part
- Requires a Chemical and Metallurgical Report (CMR)
- Is a Special Federal Aviation Regulation (SFAR) 36 repair
- Product has not been released in accordance with SQAR 149
- First Article Inspection Report (FAIR) has not been completed (SQAR 124)

235.3 Immediately upon Shipment of Hardware

The Supplier shall forward the following to the Smiths Interconnect Buyer:

- A shipping receipt with reference to the Smiths Interconnect-applicable site-assigned supplier code
- Copy of packing slip, including Smiths Interconnect Purchase Order number, release, and part number
- All required identifications for traceability (i.e., inspection certificates, physical/chemical test reports)
- A copy of the common carrier prepaid (third-party billing to Smiths Interconnect) freight bill
- Bill of lading

Supplier Quality Assurance Requirements

SQAR 240 – Acceptance Test Plan Procedure (ATP) Approval Requirements

240.1 Scope

Where required by Smiths Interconnect, the Supplier shall submit for approval the test Procedure, test characteristics and test set-up to comply with the test requirements.

Smiths Interconnect Engineering may, at their discretion, approve test documents and plans containing less information than required by this SQAR. In such cases, those documents shall take precedence over the requirements of this SQAR.

240.2 Test Procedure

The Supplier provided Test Procedure shall cover:

- Supplier Acceptance Test Procedures (SATP)
- Qualification Test Procedures (QTP)
- Lot Acceptance Test Procedures (LATP)
- Functional Test Procedures (FTP) The minimum information required includes:
- Nomenclature
- Smiths Interconnect and Supplier part number, and the Supplier code assigned by
- Procurement Specification Control (PSC) number, if any, including revision letter.

Note: An Engineering Statement of Work may be referenced for research and development articles

- Supplier Test Number, revision letter, and date.
- Equipment type, range, accuracy level, and frequency of calibration.
 - Special test equipment must reference the drawing number and revision letter.
 - If software is used to control an automated test stand, the software number and revision designator must be referenced.
 - One copy of the special test equipment drawing and software must be provided.
 - Commercial executive software for control of a computer need not be referenced or provided.
- Complete description of test performed (inclusive of all parameters and schematic of test set-up) in sufficient detail to permit a duplication of the test.
 - Out-of-tolerance is cause for rejection.

Supplier Quality Assurance Requirements

- If the Test Procedure does not test the article while it is exposed to the full ambient temperature range of the PSC, the tolerance of each tested parameter must be reduced, at ambient, to help ensure the PSC requirements are met over the full temperature range (this normalized tolerance range does not substitute for any requirement to environmentally qualify or substantiate the specified part).
 - The Supplier shall determine the tolerance, which is subject to approval by Smiths Interconnect.
- Sampling Plan (if used) must include specific item or portion of test parameter sampled.
 - Supplier Acceptance stamp, if any, to accept test results.
 - When a Supplier receives a new or repeat Purchase Order for a product that does not have an approved Test Procedure, the Supplier must submit a copy for approval.

240.3 Data Submittal

The Supplier shall submit a copy of the proposed test procedure to the Smiths Interconnect Buyer, who will forward to the appropriate Engineering or Quality group for review and approval. Test plans, data sheet format and contents are subject to Smiths Interconnect approval prior to manufacture and shipment of production parts. The document must be submitted 60 days prior to scheduled delivery of production or development articles. Shipments shall not be made until this approval has been obtained. Objective evidence of Smiths Interconnect approval shall be maintained by the Supplier.

240.4 Change Control

Changes to a Smiths Interconnect approved Test Procedure require re-approval prior to implementation, and the changes may not be incorporated until receipt of written approval from Smiths Interconnect. Test procedures that have been approved with comments may be corrected at the next required revision.

Note: Smiths Interconnect approval of the Supplier Test Procedures does not relieve the Supplier of the responsibility for determining that the product complies with the requirements of the Purchase Order, engineering drawings, and applicable specifications.

240.5 Test Data Sheet Requirements

When required, Test Data Sheets shall be enclosed in a data sheet envelope and attached to each individual unit. Each ATP data sheet shall include the following:

Supplier Quality Assurance Requirements

- Supplier name
- Date of testing
- Signature or stamp of individual performing the test
- Smiths Interconnect assigned supplier code
- Test procedure document number and revision letter
- Smiths Interconnect part number, including the dash number
- Minimum and maximum test limits
- The actual numerical test results
- Any serial number of the unit tested, such that the result for each serial number is known.
The Supplier shall maintain documentation that demonstrates the adequacy of the testing procedure. The documents shall be stored at the Supplier facility.

Supplier Quality Assurance Requirements

SQAR 241 – Acceptance Data Package

Suppliers must maintain records for a minimum of 5 years or per ISO standards, whichever is greater. Suppliers' data package must be provided in English unless otherwise specifically stated by Smiths Interconnect.

- A. Test data/report showing empirical data as defined in the drawing notes (i.e. capacitance values, breakdown voltage, reverse leakage current, etc.)
- B. Process control data/chart (i.e. dimensional results, time and temperature charts, etc.)

Supplier Quality Assurance Requirements

SQAR 250 – Advanced Product Quality Planning (APQP)

250.1 Applicability

APQP requirements apply to any Smiths Interconnect part number being made for the first time by a supplier. The requirement shall continue to apply during ongoing production. Where a purchase order holder subcontracts some/all of the manufacture of an item, the PO holder shall be responsible for the compliance of their sub tier(s) to the requirements of this SQAR.

250.2 Requirements

Purchase order holder (supplier) shall comply with AS9145 -REQUIREMENTS FOR ADVANCED PRODUCT QUALITY PLANNING AND MANUFACTURING READINESS PROCESS and the requirements of this SQAR.

APQP/MRR activity shall begin immediately upon receipt of a purchase order for a part number being made for the first time by the supplier.

MRR requirements will be defined by the responsible Quality Engineer and detailed within the Parts Submission Warrant, document GF08-004, and shall be completed in accordance with the schedules provided in applicable APQP program documents.

250.3 Process

The PSW will be approved by the responsible Quality Engineer after the supplier demonstrates the ability to produce conforming hardware while incorporating the APQP tools. Supplier shall maintain records of compliance to APQP/MRR requirements.

Supplier Quality Assurance Requirements

SQAR 251 – Process Failure Modes and Effects Analysis

251.1 Requirement

The supplier shall perform a risk assessment of their manufacturing process using the Process Failure Modes and Effects Analysis (PFMEA) methodology per AIAG FMEA (Current Revision) or equivalent.

After initial PFMEA analysis, mitigation plan development and implementation, the supplier shall update the PFMEA for the affected processes for the following changes.

- A design change affecting form, fit or function
- A change in manufacturing locations, processes or inspection methods
- A lapse in production of 2 years or more
- A breakdown in process that allows non-conforming material to be delivered to Smiths Interconnect

Supplier Quality Assurance Requirements

SQAR 300 – Packaging and Package Identification

300.1 GENERAL REQUIREMENTS

300.1.1 Product Delivery

The Supplier must ensure that all items are packaged and preserved adequately to guarantee that the hardware is delivered to Smiths Interconnect undamaged and free of corrosion. Unless otherwise specified, all hardware shall be packaged and preserved in accordance with the drawing, applicable specifications, or purchase order requirements. If there is no drawing or specification requirement, hardware shall be packaged and identified in accordance with Aerospace Industry Standards (ATA Spec 300, ASTM-D-3951-98 and MIL-STD-2073).

300.1.2 Weight Limitations

Hand-handled containers, including bundles are not to exceed 25 pounds (11.3 KG) gross weight. Containers in excess of 25 pounds shall be put on skids or pallets to permit mechanical handling. Hand-handled containers may be skidded or palletized to consolidate a shipment, but containers must be properly identified, stacked, and secured to the pallet. Shipping skids/pallets or boxes shall not exceed 2,500 pounds (1,136 KG) gross weight, and have appropriately placed pallet jack compatible fork truck slots or openings to allow mechanical handling.

300.1.3 Inappropriate Closures

Staples are prohibited as a means of closure for exterior shipping containers. Staples are permitted in non-closure portions of box type containers, such as bottom closure, side stitching, etc. The portion of the container meant to be opened must remain staple-free. Staples and other penetrating forms of unit package closure also are prohibited for use on bags (polyethylene or paper), bubble wrap, sheet foam, Kraft paper or other intermediate or interior containers. These types of unit packages must be heat sealed (if applicable) or sealed by folding, taping, Zip-Lock, or zipper sealing, etc.

300.1.4 Exterior Shipping Container

The exterior shipping container shall be sufficiently strong and functional to ensure product delivery, packaging identification and subsequent distribution and must withstand superimposed stacking loads, both as presented to the carrier and as may be expected during shipment.

Supplier Quality Assurance Requirements

300.2 PACKAGE IDENTIFICATION REQUIREMENTS*

300.2.1 Application

Bar code identification (labeling) is required on all exterior containers. Labels must be located to allow the markings to be easily read when stored on shelves or stacked, and to ensure marking will not be destroyed when the container is opened for inspection. When stencils are used, ink must be black waterproof.

Instead of using labels, it is permissible to print identification information directly on the container or packing slip as long as all other requirements are met.

300.2.2 Intermediate Package Marking

Intermediate packages, when used, shall be marked with the Part number, as specified on the PO, PO Number, Quantity and Unit of Measure (each, feet, etc.) and Supplier's Name (bar coding is optional). If product is shelf life sensitive, packaging is to be marked by the supplier with the expiration date.

300.2.3 Hand Tags

When the packaging material prohibits the use of containers that allow the application of self-adhesive labels, a tag shall be securely fastened to the material. The Supplier shall ensure that the location and attachment of the tag, under normal conditions, will not cause damage or premature removal of the tag prior to reaching Smiths Interconnect.

300.2.4 Shipping Documents / Packing Slip

Shipping documents; including the C of C, and/or the packing list required by SQAR 140, shall be attached to the exterior of container #1 in a weather-proof envelope marked "Packing List Enclosed. Specific additive customer requirements will be specified via PO and linked to receiving inspection line items. The envelope may be placed in a Tyvek envelope and securely attached to the exterior of the #1 container to prevent damage.

Identification and traceability (I&T) sheets, if provided, shall be placed inside the container or inside Box 1 of a multiple container shipment, at the top of the container (on top of the item shipped). ATP sheets shall be attached to each item or to the first wrap or bag of each item if direct item attachment is not practical.

300.2.5 Airworthiness Certification, Labeling and Consolidation Box Marking

When the PO requires a FAA 8130-3 airworthiness certification or equivalent form (Form 1), the certification form(s) and container identification shall have a bright yellow airworthiness label with bold black printing, similar to that shown in Figure 1, permanently attached to the shipping container.

Supplier Quality Assurance Requirements

Figure 1 Airworthiness Label for Exterior Container

300.2.6 Country of Origin and Marking (includes U.S.A.)

Country of origin marking is mandatory to comply with Customs Regulations or Smiths Interconnect requirements

Packaging of articles must be legibly, conspicuously and permanently marked with the parts' country of origin. For a product to be called Made in USA, or claimed to be of US origin without qualifications or limits on the claim, the product must be "all or virtually all" made in the U.S. The term "United States," as referred to in the Enforcement Policy Statement includes the 50 states, the District of Columbia, the U.S. territories and possessions. "All or virtually all" means that all significant parts and processing that go into the product must be of U.S. origin. That is, the product should contain no - or negligible – foreign content.

U.S. suppliers should contact the Federal Trade Commission, Division of enforcement, since the phrase "made in U.S.A." is under their jurisdiction. Guidance can be found at the following link, <http://www.business.ftc.gov/documents/bus03-complying-made-usa-standard>. For the purpose of this SQAR, the designation "U.S.A." is not adequate country of origin marking.*

It is the supplier's responsibility to ensure that marking on the product reflects the true country of origin of the product and that no illegal transshipment through a third country has occurred. The supplier must also ascertain that foreign suppliers are familiar with the country of origin rules.

*300.3 Electro-Static Discharge (ESD) Labeling and Packaging**

Packaging and labeling shall comply with one of the following unless specified in Smiths Interconnect approved design document: (reference SQAR 354):

- 1) ANSI/ESD S20.20 and ANSI/ESD S541 or equivalent. Or
- 2) MIL-STD-1686 and MIL-STD-2073-1. Or
- 3) JESD625 and ANSI/ESD S541

Supplier Quality Assurance Requirements

300.4 Refrigerated, Frozen or Cryogenically-Stored Items

For refrigerated, frozen or cryogenically-stored product, the supplier shall display the type of storage necessary on the outside of the package. Packages must be adequately thermally insulated to ensure temperature requirements are maintained through reasonably anticipated transportation, in-transit delays, transfers and destination.

The supplier's container shall be marked with:

- Net contents
- Manufacturer's production lot number
- Date of manufacture and expiration date
- Date and time shipped
- Warning notes and safety precautions in accordance with federal and state safety and health regulations.

300.4.1 Specific Frozen Packaging Requirements

Supplier shall package material in dry ice to maintain -40 degrees Fahrenheit during shipment, and must use a 24 hour delivery service for this shipment.

*300.4.2 Handling, Packaging, and Shipping of Moisture/Reflow Sensitive Surface Mount Devices (Electrical/Electronic Parts)**

For protection of moisture sensitive parts, handle, process, and package per the requirements of IPC/JEDEC J - STD-033 unless specified in design document.

Supplier Quality Assurance Requirements

SQAR 305 – Part Marking Requirements

The material on this purchase order must be permanently identified with the part number and revision letter in accordance with MIL-STD-130. This provision will take precedence over drawing or specification requirements.

Supplier Quality Assurance Requirements

SQAR 310 – Control of Items with Limited Shelf-Life

310.1 Scope

This SQAR defines remaining life requirements and the communication of date control information on items that require shelf life control per their product specification. Typical commodities that require shelf life controls are:

- Uncured compounds (for example: paint, adhesives, curing agents, primers, film adhesive, varnishes, elastomeric molding compounds, pressure sensitive adhesives, Prepregs, sealants, inks etc.)
- NOTE: Items such as tapes and labels which have pressure sensitive adhesive (PSA) back are categorized under uncured compounds. This includes metal nameplates with PSA backing applied
- Cured Elastomers (for example: O-rings, gaskets, plate seals, molded shapes etc.)
- Electronic Components**
- Applied Bearing Lubricants, Grease**
- Applied Bearing Preservatives**

310.2 System for Shelf Life and Storage Life Control

The supplier shall maintain a documented system for using, storing and controlling items with limited shelf or storage life. The system shall include a method of identifying and controlling such items to ensure expired items were not used in products shipped to Smiths Interconnect and that items shipped met remaining life requirements.* Shelf life shall apply per manufacturer expiry date or “use-by” date but not supersede applicable specs.

310.3 Certification Requirements

When shipping shelf-life controlled compounds and storage-life controlled elastomers, the supplier shall include the following additional information on the Certification of Conformance:

- Date of manufacture for shelf-life controlled compounds
- Cure date (QQ/YY) for storage-life controlled elastomers
- Shelf-life expiration date (MMYY) for shelf-life controlled compounds
- Storage life expiration date (QQ/YY) for storage-life controlled elastomers
- Batch and or lot number as applicable

Supplier Quality Assurance Requirements

- Date of shipment
- Manufacturer's name

310.4 Shelf Life of Limited-Life Items Shipped to Smiths Interconnect

Items that have exceeded their expiration date shall be removed from the supplier's inventory and conspicuously identified as scrap to preclude inadvertent use. All lots must be segregated and identified to maintain batch and/or lot number and cure date.

Shelf life of any uncured material as certified to by the material manufacturer will not be extended unless authorized either by the material manufacturer, or by Smiths Interconnect.

In any case of conflict between documented expiration dates, the Smiths Interconnect receiving site reserves the right to return the material to the supplier or resolve the conflict internally.

On the shipment date, uncured items/compounds must have 75% or greater shelf life remaining, but not less than 6 months unless otherwise approved by the procuring site. Exceptions are noted below.

310.5 Shelf Life of Compounds Applied to Products

The supplier shall maintain a documented system for identification and control of limited shelf life compounds so that compounds that had expired shelf life were not used on product shipped to Smiths Interconnect. (Examples of limited shelf life compounds are adhesives and paints).

Supplier Quality Assurance Requirements

SQAR 325 – Electronics Solder Requirements

Product covered under this Purchase Order is to be assembled and soldered per ANSI/J-STD-001 Revision (latest), Class 3, (Standard Requirements for Soldered Electrical & Electronic Assemblies), and acceptance criteria based on IPC-A-610 Revision (latest) and applicable Smiths Interconnect “M” specification, to the class as specified on the PO. Workmanship and testing also shall conform to the class of IPC-A-610 specified on the purchase order. Any exceptions or deviations must be delineated on the Smiths Interconnect drawing and / or Smiths Interconnect specification.

If solder testing is required per the drawing/specification then the parts must meet the applicable soldering requirements of the specification listed below:

PRODUCT TYPE	SPECIFICATION	METHOD
SEMICONDUCTORS	MIL-STD-750	2026
MICROELECTRONICS	MIL-STD-883	2003
RIGID PRINTED WIRING BOARDS	MIL-P-55110	PARA 3.7.4.5
RIGID FLEX PRINTED WIRING BOARDS	MIL-P-50884	PARA 3.4.6
FLEXIBLE PRINTED	MIL-P-50884	PARA 3.4.6
ALL OTHER PARTS	MIL-STD-202	208
WHEN REQUIRED BY PURCHASE ORDER	MIL-STD-2000	PARA 5.4.4

Components shall have been tested to the requirements listed in the above table within 18 months of the date Smiths Interconnect receives the components. The soldering test date (month and year) shall be noted on the Certificate of Conformance supplied with each shipment.

Supplier Quality Assurance Requirements

SQAR 326 – Electronics Marking Requirements

If marking permanency is required per the drawing/specification then the parts must meet the applicable marking permanency (resistance to solvents) requirements of the respective specifications:

PRODUCT TYPE	SPECIFICATION	METHOD
Semi-Conductors	MIL-STD-750	1022
Micro-Electronics	MIL-STD-883	2015
Rigid Printed Wiring Boards	MIL-P-55110	PARA 3.5.4
Rigid Flex Printed Wiring Boards	MIL-P-50884	PARA 3.4.4
Flexible Printed	MIL-P-50884	PARA 3.4.4
All Other Parts	MIL-STD-202	215

Supplier Quality Assurance Requirements

SQAR 329 – Hardness Critical Item

The parts contain Critical Characteristics shown as Hardness Critical Item / Hardness Critical Process (HCI/HCP). No substitutions or deviations are permitted.

SQAR 335 – Tape and Reeled Components

Surface mount or axial lead components shall be tape and reeled in accordance with table below. For order quantities less than 1000; bulk, ammo or rail packaging is acceptable.

Number	Carrier Type	Standard	Requirement
1	Embossed Carrier Taping	EIA 481	Surface mount components shall be supplied on tape and reel in accordance with EIA 481.
2	Axial Lead Taping	EIA 296	Axial lead through hole components shall be supplied on tape and reel in accordance with EIA 296.
3	Radial Lead Taping	EIA 468	Radial lead through hole components shall be supplied on tape and reel in accordance with EIA 468.
4	JEDEC Trays	JEDEC CO-029, etc	Integrated Circuits shall be supplied on JEDEC antistatic trays

Product shall be supplied on Tape and Reel with a minimum 6" leader and 6" tail unless otherwise instructed by the Smiths Interconnect procuring agent for modified packaging requirements.

Supplier Quality Assurance Requirements

SQAR 354 – Electrostatic Discharge Requirements

For ESDS (Electrostatic Discharge Sensitive) items, the Supplier shall establish and maintain a written electrostatic discharge control program for the control of Electro-Static Discharge (ESD) during fabrication, handling, and packaging of electrical and electronic parts, assemblies, and equipment. The program shall be based on and meet the intent of ANSI/ESD S20.20 (or equivalent), or JESD625, or MIL-STD-1686.

Material shall be packaged using electrostatic protective material. Outer packages shall be plainly marked with an ESD warning notice. Connectors shall be fitted with ESD protective caps and external terminals shall be shorted together or protected with ESD foam.

SQAR 385 – Printed Circuit Board (PCB) Testing

The Supplier shall perform continuity and circuit short testing on all double-sided and multi-layer Printed Circuit Boards (PCBs) before shipping to Smiths Interconnect.

Supplier Quality Assurance Requirements

SQAR 407 – Military Customer First Article Inspection

Verification of First Article by the Military customer (military quality assurance and/or Defense Contract Management Agency) is required. The Smiths Interconnect Quality Assurance Point of Contact will coordinate First Article inspection by the Military customer at the supplier.

If FAR 52.209-03 is required, coordinate with your Smiths Interconnect Quality Assurance point of contact or your Smiths Interconnect Buyer for the required First Article Testing (FAT) and Inspections. Requirements are documented in the Customer Purchase Order.

SQAR 410 – Outsourcing Approval Required

The Supplier shall notify Smiths Interconnect, and request written approval prior to outsourcing a process, part, assembly or end item.

Supplier Quality Assurance Requirements

SQAR 419 – Supplier Counterfeit Parts Prevention Requirements

419.1 Purpose

This SQAR 419 is intended to prevent suspect and confirmed counterfeit Electrical, Electronic and Electromechanical (EEE) and Materiel commodities from entering Smiths Interconnect's supply chain and to standardize practices to:

- a) Specify the flow down of these requirements to applicable suppliers/contractors and their sub-tier suppliers/contractors who are performing work on behalf of Smiths Interconnect;
- b) Maximize availability of authenticated EEE and Materiel;
- c) Procure EEE and Materiel from authorized sources where available;
- d) Clear risks with Smiths Interconnect when EEE and Materiel are not available from authorized sources;
- e) Assure authenticity and conformance of procured EEE and Materiel;
- f) Control EEE and Materiel identified as suspect or confirmed counterfeit within the Smiths Interconnect supply chain and in the Supplier/Contract Manufacturers' supply chain;
- g) Report suspect counterfeit and confirmed counterfeit EEE and Materiel, to other potential users and to Government investigative authorities as required by contract or by law;
- h) This SQAR is specific to counterfeit prevention and detection, and not fraudulence beyond counterfeiting.

The provisions of this SQAR 419 are in addition to Supplier's responsibility to meet all contractual / purchase order requirements. The requirements of this SQAR 419 supplement the requirements of a higher level quality standard (e.g. AS9100), the Smiths Interconnect Counterfeit Parts Prevention control plan and other quality management system requirements. The requirements of SQAR 419 support both counterfeit prevention SAE Aerospace Standards: AS5553A and AS6174. SQAR 419 is not intended to stand alone or to supersede or cancel requirements found in other quality management system documents, requirements imposed by contract, or applicable laws and regulations unless an exemption and variance has been granted in writing by the Smiths Interconnect Director of Supplier Quality.

419.2 Applicability

- a) The requirements defined in SQAR 419 apply to all commodity and assembly (EEE and Materiel purchase orders issued to Smiths Interconnect suppliers as defined in the applicability tables.
 - 1. Smiths Interconnect suppliers shall flow these requirements down to their lowest level sub-tier suppliers on behalf of Smiths Interconnect no later than the effective date of this SQAR Manual.

Supplier Quality Assurance Requirements

2. Periodic audits
 - i. May be performed to assess compliance to SQAR419 requirements.
 - ii. Will be determined by Smiths Interconnect and Smiths Interconnect sites.
 - iii. Will assess SQAR419 flow down requirements for compliance.
 - iv. Will be conducted by Smiths Interconnect and Smiths Interconnect sites as applicable.
- b) EEE and Materiel delivered by a supplier after the effective date of this SQAR Manual shall comply with the requirements set forth in the current SQAR 419 revision.
- c) The Counterfeit Avoidance (EEE or Materiel) Inspection and Testing Statement of Work (SOW) are applicable for commodity and assembly risk mitigation for Smiths Interconnect Design Authority
- d) Smiths Interconnect EEE and Materiel commodity Furnished Material will have Authorizing Documentation providing traceability to the authorized source, or material verification testing and inspection, or inventory (receipt history) documentation. The supplier may use Smiths Interconnect EEE and Materiel commodity Furnished Material with Authorizing Documentation (Smiths Interconnect CofC) without needing to comply with further requirements of SQAR 419.
- e) EEE and Materiel inventory is applicable to SQAR419. However Non-Pedigree inventory is applicable per Para's 419.3.5.1 and 3.5.2.
- f) Supplier will indemnify, defend, and hold Smiths Interconnect harmless from and against any and all loss or expense incurred by Smiths Interconnect as a result of the delivery by Supplier to or on behalf of Smiths Interconnect of suspect, fraudulent, or counterfeit EEE and Materiel Parts or Assemblies, with the exception of parts included in assemblies acquired in accordance with paragraph (d) above.
- g) This SQAR419 supports SAE Aerospace Standard AS5553A, "Fraudulent/Counterfeit EEE Parts; Avoidance, Detection, Mitigation, and Disposition", and SAE Aerospace Standard AS6174 "Counterfeit Materiel; Assuring Acquisition of Authentic and Conforming Materiel", with exceptions noted below.*
- h) All goods to be delivered will consist of new and unused materials (i.e. No used, refurbished, reclaimed) unless otherwise specified as "used" and no returned parts unless specified on the Smiths Interconnect purchase order or contract.**
- i) Suppliers Providing Product under Design Authority of Smiths Interconnect.

Companies that supply product for which Smiths Interconnect is the design authority (build to print) shall certify in accordance with SQAR 140 that all sources of part supply have been verified as Authorized, utilizing the guidance provided in SQAR 419 Table 1. In the event that a source cannot be verified as Authorized, a Counterfeit Avoidance Workflow System (CAWS) request shall be initiated to clear the risk of counterfeiting. CAWS is accessible to suppliers through the following link: <https://cpp.Smiths Interconnect.com/CounterfeitPartsPrevention/>. Training for CAWS is available through the "Help" tab on the CAWS portal. Suppliers shall maintain objective evidence that sources of supply for material being incorporated into assemblies is from

Supplier Quality Assurance Requirements

Authorized Sources, and shall make that objective evidence available upon Smiths Interconnect and U.S. DoD Contracting Officer (when applicable) request for review and audit.

When a First Article Inspection Report (FAIR) is initiated, Suppliers shall have a FAIR in Net-Inspect for EEE or Materiel commodities incorporated into sub-assemblies for which Smiths Interconnect has design authority that certifies:

- Compliance to SQAR 419 Supplier Counterfeit Parts Prevention Requirements and the drawing requirements;
- That all sources have been verified as authorized in accordance with SQAR 419 Table 1 or a Counterfeit Avoidance Workflow System (CAWS) request has been initiated to clear the risk of counterfeiting.

j) Suppliers Providing Product under the Supplier's Design Control.

For companies that supply product to Smiths Interconnect under their own design authority, SQAR 419 requirements to obtain parts from Authorized Sources still apply. However, Suppliers should utilize their own counterfeit parts control plan in accordance with applicable regulations to verify parts acquisition from Authorized Sources and to mitigate any related risk of counterfeiting instead of using the aforementioned CAWS request. Industry specifications such as SAE AS5553 – “Counterfeit Electrical, Electronic, and Electromechanical (EEE) Parts; Avoidance, Detection, Mitigation, and Disposition” and AS6174 – “Counterfeit Materiel; Assuring Acquisition of Authentic and Conforming Materiel” provide the framework to create a counterfeit parts control plan. Additional information and industry specifications on counterfeit avoidance and detection are available through the SAE Website: <https://www.sae.org/news/3558/>. Suppliers shall maintain objective evidence that sources of supply for material being incorporated into assemblies is from Authorized Sources, and shall make that objective evidence available upon Smiths Interconnect and U.S. DoD Contracting Officer (when applicable) request for review and audit.

The SQAR 419 takes exception to the following elements from both SAE Aerospace Standards:

- AS5553 - 4.1.4.c Purchasing Information, and consistent with the standard, Smiths Interconnect considers the appendices as guidance.
- AS6174 - 3.1.6 Materiel Control, and consistent with the standard, Smiths Interconnect considers the appendices as guidance.

419.3 Reference Documents

The following documents are directly associated with the application of SQAR 419.

Supplier Quality Assurance Requirements

- For dated references, only the edition cited applies.
- For updated references, the latest edition of the document, including all amendments, applies unless otherwise specified by contract.

In the event of conflict between the provisions of this SQAR 419 and references cited herein, the provisions of SQAR 419 take precedence.

419.4 SAE Publications

- SAE Aerospace Standard AS5553 (current release) - Fraudulent/Counterfeit Electronic Parts; Avoidance, Detection, Mitigation, and Disposition
- SAE Aerospace Standard AS6174 (current release) - Counterfeit Materiel; Assuring Acquisition of Authentic and Conforming Materiel
- SAE Aerospace AS9100 (current release) - Quality Management Systems - Requirements for Aviation, Space and Defense Organizations

Available from SAE International, 400 Commonwealth Drive, Warrendale, PA 15096-0001, Tel: 877-606-7323 (inside USA and Canada) or 724-776-4970 (outside USA), www.sae.org.

419.5 Commercial Publications

- DEA-STD-1010 Acceptability of Electronic Components Distributed in the Open Market

Available from Independent Distributors of Electronics Association (IDEA), 6312 Darlington Avenue, Buena Park, CA 90621, Tel: 714-670-0200, www.idofea.org.

Supplier Quality Assurance Requirements

SQAR 420 – Provisions for Export-Control Regulation

When Smiths Interconnect drawings and/or specifications are identified as “Export Controlled” (which may include but not limited to: ITAR, EAR), the supplier shall not divulge information and material to a foreign person (including organizations), unless written authorization from the Department of State is received or a special exception is used.

Supplier Quality Assurance Requirements

SQAR 430 – Provisions for ReaCH and RoHS Requirements

Product should meet ReaCH / RoHS regulations based on the dash number of the SQAR, as shown in the chart below:

SQAR dash	Description	Details
430-1	Fully RoHS Compliant 2002	Items, materials, or processes shall be fully RoHS compliant per European Parliament Directive 2002/95/EC. The supplier shall provide a signed Certificate of Conformance (CoC) stating compliance to RoHS 2002; the CoC shall reference the packing slip or order number. Supplier shall provide Smiths Interconnect with a description of any materials or processes used that are not RoHS compliant as related to the product or process being supplied.
430-2	RoHS Compliant, Except Lead In Solders	Items, materials, or processes shall be RoHS compliant per European Parliament Directive, with the exception of lead (Pb) in solders. The supplier shall provide a signed Certificate of Conformance (CoC) stating compliance to RoHS with the exception of Lead (Pb) in solders, the CoC shall reference the packing slip or order number. Supplier shall provide Smiths Interconnect with a description of any other materials or processes used that are not RoHS compliant as related to the product or process being supplied.
430-3	RoHS Compliant, Contains Lead >85% Weight in High Temp Solder	Items, materials, or processes shall be fully RoHS compliant per European Parliament Directive, and contains lead (Pb) > 85% by weight in high melting temperature solders. The supplier shall provide a signed Certificate of Conformance (CoC) stating compliance to RoHS allowing Lead (Pb) > 85% by weight in high melting temperature solders, the CoC shall reference the packing slip or order number. Supplier shall provide Smiths Interconnect with a description of any other materials or processes used that are not RoHS compliant as related to the product or process being supplied.
430-4	Fully RoHS Compliant 2011	Items, materials, or processes shall be fully RoHS compliant per European Parliament Directive 2011/65/EU. The supplier shall provide a signed Certificate of Conformance (CoC) stating compliance to RoHS 2011; the CoC shall reference the packing slip or order number.

Supplier Quality Assurance Requirements

430-5	RoHS /ReaCH	The supplier shall certify that materials / chemicals supplier to Smiths Interconnect are RoHS/ReaCH compliant. In case of NOT compliance, this status shall be declared in the CoC as NOT RoHS/ReaCH compliant.
--------------	-------------	--

NOTE: Certifications provided should be in addition to any other documentation required per SQAR 140.

Supplier Quality Assurance Requirements

SQAR 440 – Process Control Plan

440.1 Requirement

The supplier shall maintain a Process Control Plan (PCP) detailing how Key Characteristics and processes will be controlled. The PCP must be maintained by the supplier and on file for review upon request.

SQAR 450 – Measurement System Analysis (MSA)

450.1 Requirement

The supplier shall perform Gage R&R studies in accordance with AIAG MSA (Current Revision) for gauges used to perform acceptance or rejection of features identified as Key Characteristics (per SQAR 200).

Acceptability shall be determine by the following table.

Gage R&R Percentage	Decision	Comments
Under 10%	Acceptable	Gauge is suitable for use.
Between 10% to 30%	May be acceptable for some applications	Requires approval by Smiths Interconnect prior to use.
Over 30%	Not Acceptable	Gauge system is not suitable for measurement strategy.

Supplier Quality Assurance Requirements

SQAR 509 – Manufacturing Readiness Review

509.1 Requirement

A joint Smiths Interconnect and Supplier Manufacturing Readiness Review (MRR) shall be conducted at the supplier's facility prior to the start of manufacturing when required by the Purchase Order (PO) or Statement of Work (SOW). The supplier shall submit the MRR data package to the Smiths Interconnect Buyer a minimum of 10 days in advance of the scheduled MRR.

509.2 MRR Objective

The MRR objective is for the supplier to demonstrate the overall production readiness prior to manufacturing, and to ensure that items to be manufactured will meet the requirements of the PO, SOW, engineering drawings and engineering specifications. The supplier shall demonstrate that all necessary manufacturing plans, inspection plans, travelers (build documentation), tooling, facilities, and other resources are in place and available to ensure meeting all quality and design requirements within the negotiated program budget and schedule.

509.3 MRR Team

The supplier MRR team shall consist of representatives from the management and the technical functions. The management functions shall include the contract administrator and responsible project engineer as a minimum. The technical representatives shall include design engineer/representative, manufacturing engineer/representative, and quality engineer/representative as a minimum.

509.4 MRR Presentation

The MRR presentation shall address the following items as a minimum:

- Supplier Project Team Organization with key personnel identified
- Overall Program Schedule including current status
- Procurement status including all sub-tier suppliers, and if applicable, Qualification status
- Manufacturing milestone schedule
- Action Item Status/Review
- Design Status (as applicable) including current status, trade-offs, producability studies, lessons learned, etc.

Supplier Quality Assurance Requirements

- Detailed Manufacturing Flow Diagram including supplier inspection points and Buyer Mandatory
- Inspection Points (MIP).
- Manufacturing Documentation Status
- Inspection Documentation Status
- Test Documentation Status
- Tooling needs and statuses including drawing status, build status, calibration status, etc.
- Facilities Readiness including layout and capacity (including plant tour during MRR)
- Operators and Inspectors training
- Overall Project Risk Assessment; technical, cost, schedule. Should include any plans to mitigate risks identified.
- Any additional requirements to be part of the presentation as defined in the PO/SOW

509.5 MRR Data Package

The MRR data package shall include the following as a minimum:

- Copy of MRR presentation
- Any Subcontractor (Supplier) Data Requirements List (SDRL) items as defined in the PO/SOW

509.6 MRR Supporting Documentation

The following documentation, as a minimum, shall be available for review at the MRR:

- Supplier Drawings and Specifications (as applicable)
- Traveler(s)/Build Documentation
- Test Procedures (as applicable)
- Inspection Procedures
- Tooling Drawings

Supplier Quality Assurance Requirements

SQAR 528 – Homogeneous Material Requirement

All material supplied under this specification number shall be homogeneous. Homogeneous supplies are defined as material that is produced:

- To the same design as defined by the buyer and seller's documentation;
- From the same material as defined by the applicable material specification.

When alternate materials are allowed by the purchase order and associated documents, the supplier must certify to a specific alternate.

After material has been submitted to Smiths Interconnect, the supplier may not change alternates without prior written approval from Smiths Interconnect.

The supplier is not restricted to any source of supply of raw material as long as the material meets the applicable specifications; by the same manufacturing process as defined by the seller's manufacturing plan. Changes in manufacturing location or production discontinuities of one month or more violate this requirement.

All manufacturing process sheets shall have a revision date not later than the date of the initial shipment of supplies to Smiths Interconnect, and the process used to manufacture the initial product shipment and all shipments thereafter.

Departure from these requirements, including changes suggested by Smiths Interconnect, must be approved in writing by Smiths Interconnect's Quality Engineering department prior to such departure.

Supplier Quality Assurance Requirements

SQAR 529 – Delegation of MRB Authority

The supplier is hereby granted authority to perform Material Review Board (MRB) actions on material not in conformance. Results of the MRB action shall be submitted to the Buyer with each shipment of the affected material.

- Supplier shall furnish one copy of all Material Review reports to Buyer's Supplier Quality Engineering Department via Buyer's Purchasing Department. One copy of each Material Review action shall be included with the shipment of affected material. These reports shall list in detail the salvage methods utilized, if applicable.
- Final review authority over Supplier's Material Review decisions is retained by Smiths Interconnect.
- The Supplier shall not make substitution of Material Review members or delegate Material Review authority to subcontractors performing work on Buyer parts without advance written authorization from Buyer.
- Supplier Material Review action is not allowed when interchangeability, external configuration, function, service life, safety, reliability, or point of attachment to Buyer assemblies are affected.

Supplier Quality Assurance Requirements

SQAR 532 – Cosmetic Part – Visual Inspection Requirement

Obvious blemishes (e.g., digs, pits, scratches, etc.) are not permitted. Parts should be packaged individually or in containers using dividers. Suppliers shall ensure that inspection practices include a thorough visual examination of product and shall refer to site specific workmanship specifications where available.

SQAR 534 – Paint / Plating Thickness Test Required

Painting or plating thickness tests shall be conducted on the item(s) on this order by the painting or plating supplier. Painting or plating thickness test data shall be provided with the shipment.

SQAR 535 – Material Test Report

The supplier shall provide legible test reports identifiable with purchase order number/material heat or lot number and the applicable specification and revision with each shipment. The report must contain chemical/physical analysis (as applicable).

Supplier Quality Assurance Requirements

SQAR 536 – TSO / PMA Tags

If the supplier holds certification (TSO/PMA/TC), the supplier is responsible for assigning and maintaining serial number control. If Smiths Interconnect holds the certification (TSO/PMA/TC), the supplier shall assign serial numbers sequentially beginning with serial number 1001, or as otherwise directed in the Purchase Order.

For product with supplier held TSO/PMA, the supplier shall provide an FAA Form 8130-3 or equivalent Airworthiness Approval Tag with each product, or for large shipments a single FAA Form 8130-3 or equivalent covering the range of serial numbers shipped. If the Smiths Interconnect part number differs from the TSO/PMA/TC approved part number, the Smiths Interconnect part number shall be referenced on the 8130-3 or equivalent form (it is acceptable to use Remarks Section 13). For individual products, the original certification shall be attached to the exterior of each product container in a protective envelope or inside the box provided that a stamp/label on the box exterior indicates the enclosure. For products covered under a range certification, a copy of the certificate shall be attached to the exterior of each product container in a protective envelope or inside the box provided that a stamp/label on the box exterior indicates the enclosure.

Smiths Interconnect will specifically request suppliers to provide 8130-3 tags to each country to which the products are shipped if they are not shipped to domestic customers. In case of products that are to be shipped to any of EU customers and if those products require TSO certification and/or supplier holding TSO approvals for the products, such suppliers shall provide a FAA Form 8130-3 containing a reference to the FAA TSO. Authorization number in remarks block. This is per EASA regulation 5.1.6b (2) which states that each new appliance exported to the EU with FAA Authorized Release Certificate shall have an FAA Form 8130-3 containing a reference to the FAA TSO Authorization number in the remark block.

Supplier Quality Assurance Requirements

SQAR 542 – Diodes – Metallurgical Bond

During performance on this order, your control of device lot traceability documentation and your inventory control for MIL-S-19500F JAN branded devices are subject to review, validation and verification by an authorized Government representative. Government release of shipment is not required unless you are otherwise notified.

MIL-S-19500 diodes shall be constructed using only a metallurgical bond between the die and the header.

Supplier Quality Assurance Requirements

SQAR 557 – X-Ray Film Required

Radiographic film, (uncut sheets), digitized film or digital radiograph, with penetrometers intact, is required. The media and marking shall include:

- device manufacturer
- device type
- production lot code or date code
- radiographic film / digitized film / digital radiograph view number and date
- device serial number or cross reference list, and
- X-ray/digitizer laboratory identification (if other than manufacturer).

Supplier Quality Assurance Requirements

SQAR 601 – Compliance with DFAR regulations

601.1 Scope

The supplier shall ensure that all specialty metals procured/provided in support of the contract meet the requirements as set forth in the Federal Acquisition Regulations System section 252.225.7009 Preference for Domestic Specialty Metals (as applicable).

When specialty metals indicated, items on this order shall comply with DFAR 252.225.7008 for specialty metals listed and shall be made in the US or qualifying countries listed in DFAR 252.225.872.1. Compliance shall be verified on a certificate of compliance.

601.2 Specialty Metals Definition

Steels with a maximum alloy content exceeding one or more of the following limits:

1) Magnesium 1.65%, Silicon 0.60%, or Copper 0.60% or containing more than 0.25% of any of the following elements -- Aluminum, Chromium, Cobalt, Columbium, Molybdenum, Nickel,

Titanium, Tungsten or Vanadium.

2) Metal alloys consisting of Nickel, Iron-Nickel, and Cobalt base alloys containing a total of other alloying metals (except Iron) in excess of 10%

3) Titanium and Titanium alloys, and Zirconium and Zirconium alloys.

Supplier Quality Assurance Requirements

SQAR 604 – Provisions for 100% inspection required

Supplier is required to perform 100% inspection to ensure compliance to drawing and specification requirements. Objective evidence of this inspection must be maintained on file and available for Smiths Interconnect review, and traceable to the individual doing the inspection operation.

Reference to 100% inspection to be included in CoC and package labeling.

SQAR 605 – Provisions for Handling and Packaging of Precious Metals

605.1 Handling

Items on this order are precious metal parts or stock and shall be handled and stored in accordance with PTM-25. When items from the order are removed from the original manufacturers or suppliers packaging, the intermediate packaging shall be of equivalent protection as the original packaging and shall be marked to indicate handling and storage per PTM-25.

605.2 Packaging

Items on this order are considered precious metal parts and/or stock and shall be packaged to prevent environmental contamination. Outer packages shall be marked to indicate precious metal parts and/or stock.

Supplier Quality Assurance Requirements

SQAR 606 – Internal Source Inspection Required

606.1 Scope

Product requires a Smiths Interconnect Source Inspection, as shown in the chart below:

SQAR dash	Description
606-1	Precap Source Inspection
606-2	In-process Source Inspection
606-3	Final Source Inspection

Note: More than one dash number may apply.

606.2 Process

The supplier shall notify the Buyer a minimum of 5 days in advance of when the material will be ready for Smiths Interconnect Source inspection. If the material will not be ready for Smiths Interconnect source inspection on the scheduled date the supplier shall notify the Smiths Interconnect Buyer at the earliest possible date and as a minimum 24 hours before the scheduled inspection.

SQAR 607 – Sulfur Content

Sulfur content of sponges shall be less than 100 parts per million. Certifications to this requirement shall be provided with each shipment

Supplier Quality Assurance Requirements

SQAR 610 – Smoke and Fire Requirements EN 45545 (molded plastic parts) Materials

The supplier shall:

- Provide a Material Certification (chemical composition) or a Certificate of Conformance (per SQAR) compliant according to the technical data sheet from the manufacturer.
- Inform Smiths Interconnect about technical, or description, or of manufacturing location changes with an UNIFE declaration (www.unife.com) or EN 45545-2 test report compliant to R22 R23 requirements dated less than 5 years. www.certifer.fr

If the standard parts are not accompanied upon delivery by all of the requested documents, and if the supplier cannot transmit the requested documents for production parts, Smiths Interconnect shall return the articles as a non-conformity.

Copies of the documents are requested with the parts and shall be send by E-mail or fax to the Purchasing / QA Departments.

Repeated cases of missing documents may cause the supplier to be placed on a 'Not Approved' status and not eligible for new business.

Supplier Quality Assurance Requirements

Change History

Revision	Initiated by	Date	Description of Change / Reason
A	W. Stull	23-MAY-2019	Initial Release
B	W. Stull	18-SEP-2019	Revised SQAR's 200, 220, 300, 509
C	W. Stull	29-OCT-2019	Revised SQAR 310 to correct an error related to the shelf life requirement for limited life items.
C	Luis R.	15-Jan-2020	Update release date per GCMS 2020-2301 – No rev change needed
